

A photograph of a large industrial facility interior, likely a manufacturing plant or warehouse. The image shows multiple levels of metal walkways and stairs, illuminated by overhead lights. The scene is viewed through a large, white, geometric shape that frames the left side of the image. The overall aesthetic is clean and professional, with a focus on industrial infrastructure.

PRO-DRY

FULTON SYSTEMS

PRO-DRY

Fulton Systems Pro-Dry is the new way to control your dryer steam system. Stand alone or integrated into your existing DCS, Pro-Dry will give you more control and accountability than you have ever seen in a new or retrofitted application.

With Pro-Dry, your vision becomes your machine. Pro-Dry software is capable of taking your P & ID or flow sheet directly to your machine. The design parameters you set in the office are directly transferred to your operating system—no compromises, no modifications. What you want is what you get.

We have a custom process to assure your intentions end up on your machine.

This starts with your process. Your personnel review your needs with our professionals. We go over the intent of your process design, establish criteria and battery limits. A preliminary schedule is reviewed.

Taking your ideas and our expertise, our team prepares design concepts and starts the iterative design process with your team. We must exit this phase with your design requirements fully reviewed and accepted by all parties involved, especially you.

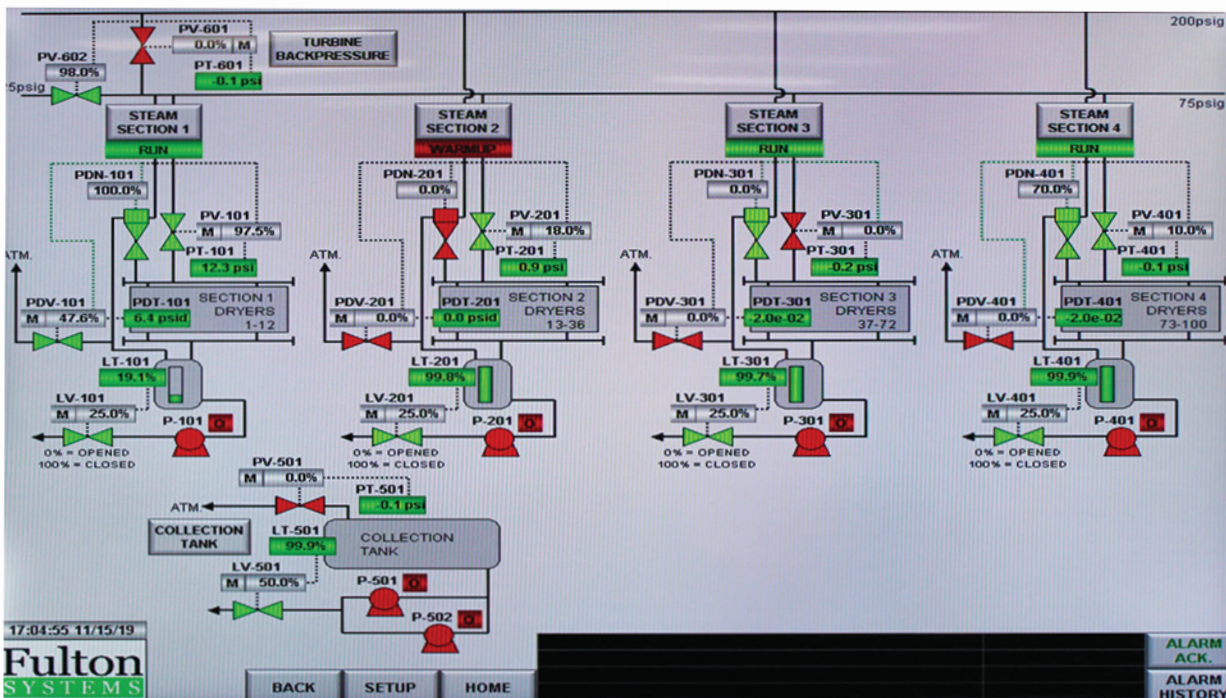

We'll take a bit of time to make sure what you want is what is possible. Then we will ask you to approve the design.

Next, your project goes into our production and testing schedule. We assemble the components and software according to the approved design parameters.

Once the system is assembled in our shop, it is tested there. If you wish to witness testing, you are more than welcome.

Thoroughly tested, we ship the system to your mill for installation. Our rigid process is designed to minimize machine downtime for you. Ramp up with the new system is quick and easy.
